PROPOSED PROJECT TITLE

GEAR SIGHT 

Desktop Application to Assist Education on Car Anatomy

TEAM MEMBERS

1. Naufal Razin Bin Rosli (SWE24070006)
2. Muhammad Zahirulhaq Azri Bin Mohd Zabri (SWE25010100)
3. Nur Alya Syuhada Binti Faizal (SWE25010068)

SUPERVISOR

Syamiel Amirun Aqim Bin Saarol Nizam

INTRODUCTION

What is Gear Sight?

A desktop application that is able to run simulations allowing students to:

- Observe and interact with 3D car models
- Visualize internal mechanical workings in real-time
- Learn through immersive virtual experience

PROBLEM STATEMENT

Three main issues:

- Theoretical Learning Driven
- Institutional Constraints
- Absence of Interactive Digital Platform

PROBLEM STATEMENT

Theoretical Learning Driven:

- Reliant on observation over interaction
- Over-reliance on content delivery systems
- Assesment based where answers can be direct.

PROBLEM STATEMENT

Institutional Constraints:

- Limited budget for practical equipment
- Insufficient floor space for workshops
- Parts too small for students to observee

PROBLEM STATEMENT

Absence of Interactive Digital Platforms:

- No standardized software
- No scalable solution for diverse hardware
- Unable to model complex inner car workings

PROJECT OBJECTIVES

What we aim to achieve:

- To develop a desktop application.
- To develop interactive 3D car simulations.
- To optimize for affordable hardware. (PC Office/Gaming Laptop)

FEATURES

Main Features:

- Observe close-up of parts
- Internal workings of car hood
- Allow users to use wherever they desire

FEATURES

Additional Features:

- Hotswappable Parts
- Detailed internal workings and physics
- Mobile version

SPECIALTY

Products on the market:

- Requires a license
- Requires strong hardware
- Focuses on fixing expect

Our Project:

- Accesible to anyone
- Wildly scaleable
- Hotswappable while showing internal workings

Q&A
