Project : AI Powered fashion scanner

Problem Statement

1. Difficulty in Matching Clothes

- Users may struggle to find clothes that match.
- It can be difficult to know if new clothes fit their existing wardrobe.
- This may lead to unsuitable outfit combinations.

2. Manual Wardrobe Management

- Users need to organize their clothes manually.
- It can be difficult to keep track of all clothing items.
- Existing wardrobe management may provide limited smart assistance.

3. Time-Consuming Outfit Selection

- Users may spend a lot of time deciding what to wear.
- They need to check different clothing items before making a choice.
- Finding a suitable outfit can become difficult when they have many clothes.

Project Objectives

1. Develop an AI Clothing Scanner

- Use AI image recognition to identify clothing items.
- Identify basic clothing categories and colours.
- Reduce the need for manual clothing input.

2. Provide Outfit Matching Recommendations

- Suggest suitable clothing combinations.
- Match scanned items with clothes in the user's wardrobe.
- Help users choose outfits more easily.

3. Develop a Digital Wardrobe

- Allow users to store their clothing items digitally.
- Organize and manage wardrobe items in one place.
- Make it easier for users to view and select their clothes
