Algorithm Emulator

Predict execution time of algorithm

1.0 Introduction

- Companies might not be sure what search or sort algorithm is the best

Idea

- Have a program with a few search and sort algorithm
- Upload a db file
- Program runs a few datas and draw graph to predict how much time would it take to run the whole db

Main Concern

- Alot of different algorithms
    - Allow self plugin to add algorithm?
    - have field for algorithm code they already have?
        - What if different language?
- Might be too simple?
- Not much commercial value

- Alot of different db types
